CASANOVA PROPOSED MONOPOLE

Affidavit of Philip Savard

To whom it may concern:

We arrived at the site (5348 Cassanova Road Warrenton, VA) around 8:30 AM on September 8th, 2016.
We had the balloon to the correct height of 145 feet by 8:45 AM
The weather was sunny and the wind was calm.
My assistant stayed with the balloon, using a laser range finder to constantly measure the height of 145 feet , while we drove around to take photographs. All photographs were taken at the correct focal length of 50 mm (film equivalent) that equals the human eye. Any photo taken at a wider focal length, or one that is zoomed in from the focal length we shoot with, will give you an altered perspective of the Monopole.
I was in constant radio communication with my assistant to verify the balloon was flying at the correct height before each photo was taken.
The balloon was in the air until 11:00 AM.
